PORTFOLIO

END-USER SOLUTIONS

Make cross platform applications for web-clients and mobile, reachable from anywhere in the world, with a modern and responsive look and feel.

CLOUD APPLIANCE

Create complex enterprise software, ensure reliable software integration, modernize your legacy system.

INFRASTRUCTURE

Build virtualized and scalable systems, abstract your applications over cloud infrastructures, control and orchestrate your deployments in real time.

FIRMWARE

Build firmware and infrastructure for your IoT projects, interconnected with your digital world and space.

SKILLS

System / Embedded Programming
Back-end development
Front-end development
Database management and administration
Reverse Engineering
OS Internals and Device Drivers
Software and Network Security Assessment / Bug Hunting
Automation and orchestration
Infrastructure monitoring
Strong knowledge of operational security

TECHNOLOGIES

Languages and Framework: C, Rust, Go, Assembly, Python, JAVA, ReactJS, AngularJS, JS, HTML5, CSS, Android SDK, React Native
Infrastructure monitoring: Prometheus, Grafana, Vector, Loki
Databases: Postgres, MySQL, Elasticsearch, MongoDB, Clickhouse and others
Cloud Services: AWS, Azure, GCP
Configuration management: Ansible, Saltstack and others
Automation & orchestration: Terraform, Nomad, Consul, Vault, Kubernetes, Ceph, glusterfs, DRBD, Linstor and others
VPN: Wireguard, IPSEC, Openvpn, TINC
